# BCM ONE SIP: SHARED TRUNK RESOURCES

REDUCE TRUNK SUBSCRIPTIONS BY 33% (AVG)

Shared Trunk Resources

## Trunk Resources Shared

- Avoid Under-Utilization Waste
- Share Resources on Demand
- Autodetecting Failover

# AUTODETECTING DISASTER RECOVERY

AUTODETECTING    PRESET FAILOVER    WEB PORTAL CONTROL    FAILOVER TO PHONE #'S OR IP ADDRESSES

MyAccount  Settings > Disaster Recovery Routing

Disaster Recovery Routing, allows incoming calls to be forwarded to an alternate destination in the event that the call could not be delivered to the intended location due to a problem with your phone system or your internet access connection. Each number is individually configurable and you can specify up to three alternate locations. Each alternate location can be either a standard telephone number or an IP end point. For example, you can forward calls to your cell phone. (Note, calls routed back out to the traditional phone network will be treated as normal outbound calls for billing purposes).

To setup Disaster Recovery Routing for a number, click on the Edit icon to the far right for the number you want to setup. If you are entering a telephone number, please enter 1+10 digits. Sorry, no international numbers. If you are entering an IP destination, please enter in either 1) the dotted IP address of the destination system if it is using a static IP address, or 2) the text user name that the destination system is using to Register with our service if it is using a dynamic IP address.

You can remove all DR routes for a number by clicking on the Trash can to the far right.

To cancel this service, please go to **Order Services > Disaster Recovery Routing**.

Phone Number	1st Alternate Route	2nd Alternate Route	3rd Alternate Route
<input type="checkbox"/> 16162590602	66.23.136.140	17034392717	17034392732
	IP Address	Backup Analog line	Cell Phone

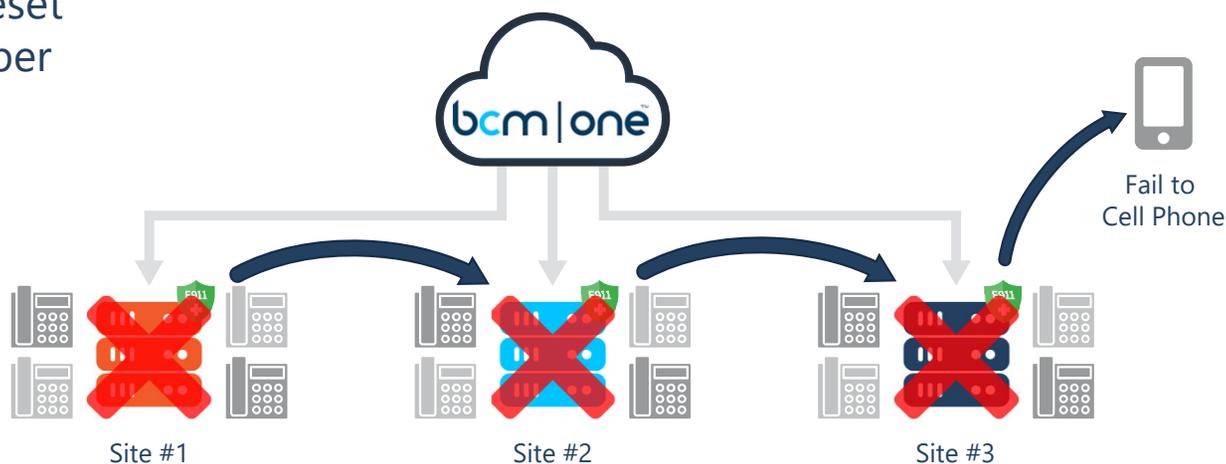

# MULTISITE, MULTIPLE PBX FAILOVER

## AUTODETECTING DISASTER RECOVERY:

*Included Free with Every SIP Account*

### Value Points

- Disaster recovery rules can be preset by *individual* DN or toll-free number
- IP address or phone number and managed through our easy-to-use-portal

# E911 PORTAL MANAGEMENT

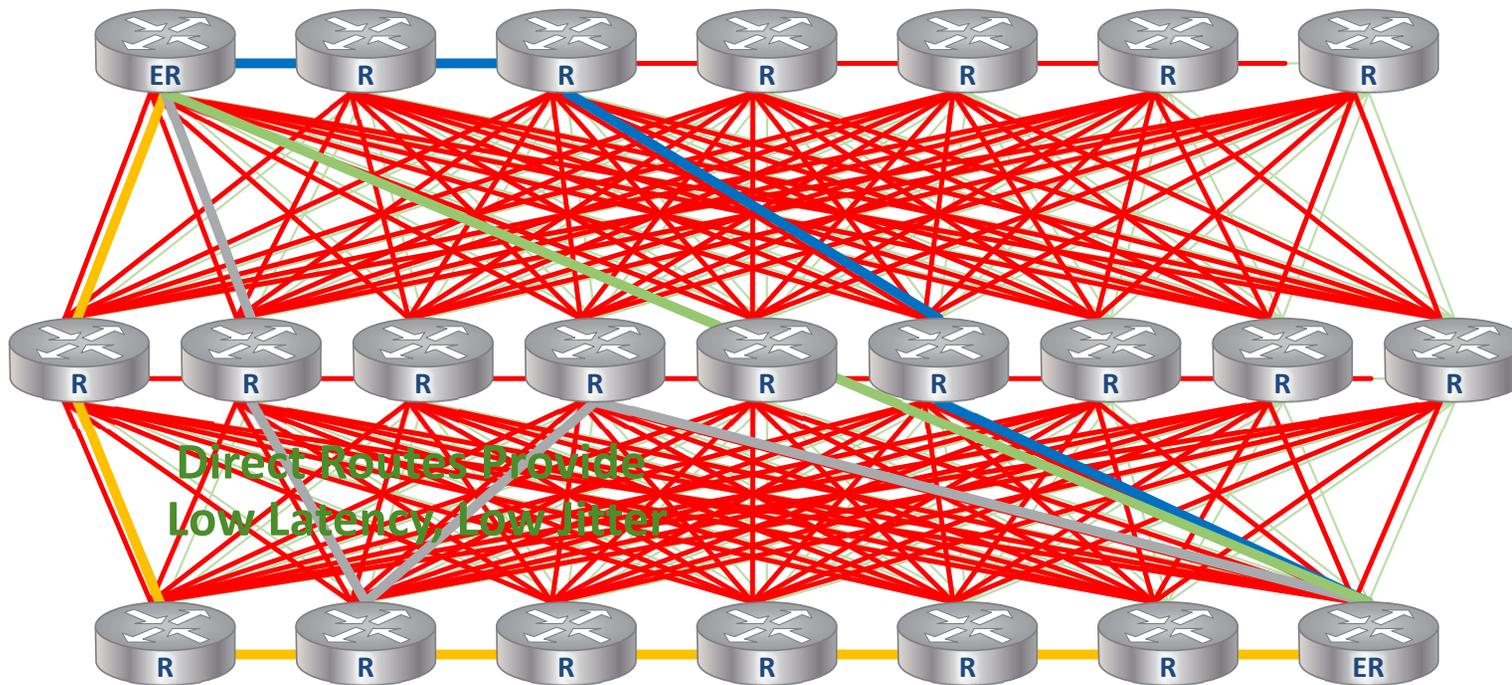

- Manage E911 addresses through nexVortex online portals
- E911 visualized for easy provisioning and updating
- Address line 2 is available for:
  - Room numbers
  - Floor Info
  - Suite Number
- Test E911: Dial 311 or 933

The screenshot shows a web portal interface for managing E911 links. At the top, account information is displayed: Account: 63908718, Status: Active, Balance: \$-210.05, and a ChargeUp button. The main navigation menu on the left includes MyAccount, Settings, E911 Locations, International Calling, E911 Links - Partner, E911 Links (selected), Number Inventory, Number Routing, Disaster Recovery Routing, Directory Assistance, Conferencing, Notifications & Alerts, Billing & Payments, Reports, Order Services, and Support. The main content area is titled 'Settings > E911 Links' and is divided into three steps. Step 1, 'Please select location', shows a 'Hide Configured Items' button and three location cards with details like phone numbers and addresses. Step 2, 'Choose E911 link type', has a dropdown menu set to 'Phone based'. Step 3, 'Click on items to link to the selected locations', shows a list of 'Unknown 911 Locations' with 'Configured' status and phone numbers.

# OVER THE TOP ROUTING CAN BE UNPREDICTABLE

# MSIP ARCHITECTURE WITH PEERING

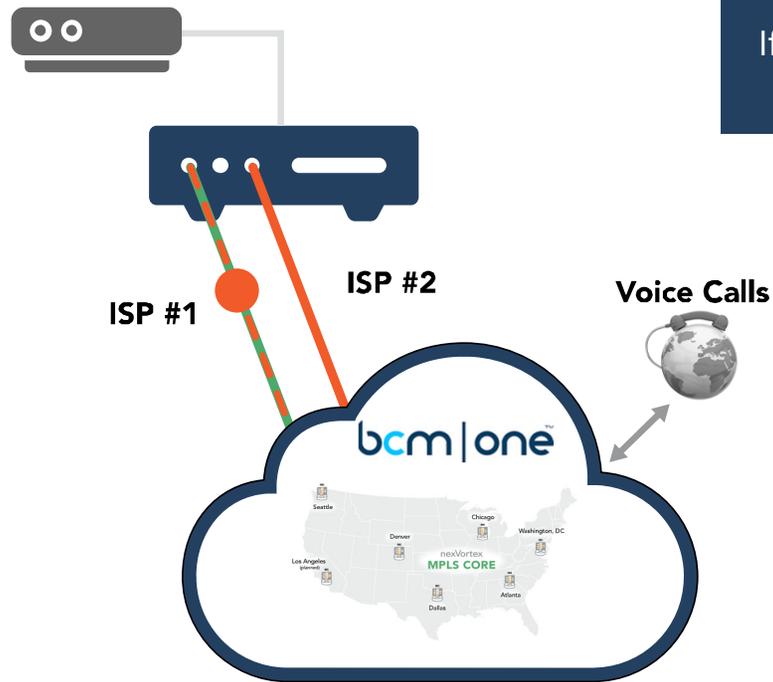

# MSIP IMPLEMENTATION – PROVIDED SBC

- Pre-Configured SBC for native Interoperability
